Patient Agreement

Thank you for choosing the Breathing Center of Houston to meet your cardiopulmonary needs. We are committed to providing you with quality and affordable health care. Please read through the following policy and ask us any questions you may have. Copies of these agreements will be kept on file and are available to you upon request.

Patient Understanding and Acceptance of Risks Associated with Treatment

As your doctor it is our responsibility to inform you of the potential risks and benefits of your treatment, but we also want to assure you that we strive to minimize these risks by providing thorough clinical examination and by performing diagnostics as clinically indicated. Furthermore, we continually review medical literature pertaining to current trends within our profession as well as throughout the entire medical community to ensure the safest and most effective care.

Some responses to therapeutic interventions are muscle soreness, muscle fatigue, increased discomfort, overall tiredness and/or joint stiffness and/or pain. It is important that you inform your treating staff member of any of these responses following your treatment and more importantly it is crucial that you continue to attend your appointments as scheduled so your condition can be documented and your symptoms effectively managed.

I also understand that the rehabilitation process, by its very nature, involves certain inherent and unavoidable risks, including falls, and other similar injuries, and that the only alternative to entirely avoid these risks would be to forego rehabilitation all together.

Therapeutic interventions consist of the following types of treatments: stretching, flexibility exercises, strengthening exercises, joint mobilizations and myofascial release.

Therapeutic interventions are generally quite safe though there are risks associated with each of these procedures. The primary risk is potential aggravation of your current condition and/or underlying condition. As with any physical activity and/or exercise there is also the risk of injury. Though this risk is minimal as you are under the direct supervision of experienced clinical staff, it may still exist.
